AI Hub

Es el espacio centralizado dentro de Power Automate (y Power Platform) para descubrir, crear y gestionar modelos de Inteligencia Artificial.

- **Enfoque Low-Code:** Permite integrar capacidades de IA avanzada en los flujos de trabajo sin necesidad de tener experiencia previa en ciencia de datos o programación compleja.
- **Evolución:** Es la evolución directa de *AI Builder*, unificando los modelos tradicionales de machine learning con las nuevas capacidades de IA Generativa respaldadas por Azure OpenAI.

AI Hub

Capacidades principales

- **Modelos Precompilados (Listos para usar):** Modelos entrenados por Microsoft para tareas comunes como lectura de facturas, análisis de sentimiento, extracción de entidades clave, traducción y reconocimiento de texto (OCR).
- **Modelos Personalizados:** Permite entrenar modelos propios utilizando los datos históricos de la empresa (ej. clasificación de correos específicos o procesamiento de formularios internos).
- **IA Generativa (Prompts):** Capacidad para crear instrucciones (prompts) personalizadas que permiten resumir textos, redactar respuestas o clasificar información no estructurada usando modelos de lenguaje grandes (LLMs).

AI Hub

The screenshot displays the Power Automate AI Hub interface. At the top, a dark header bar contains the UNAULA logo, the text "Power Automate", a search bar with the placeholder "Search for helpful resources", and environment information "Environments curso_automate_dev" along with icons for help, settings, and a user profile. A left-hand navigation pane lists various features: Home, Create, Templates, Learn, My flows, Approvals, Solutions, Automation center, Process mining, AI hub (highlighted in blue), More, and Power Platform. At the bottom of this pane is a chatbot icon labeled "Ask a chatbot". The main content area features a large blue banner with the heading "Enhance your automation with GPT" and a subtext about using generative AI with natural language prompts. A "Try Prompts" button is located within the banner. Below the banner, a section titled "Discover an AI capability" presents four options: "Prompts" (selecting or creating prompts), "AI models" (working with tailored models), "Document automation" (extracting data from documents), and "Monitor activity" (tracking model usage). At the bottom, a "Recently created" section includes a "My AI capabilities" button and filters for "Prompts" and "AI models".

Enhance your automation with GPT

Boost your workflows and automation with the power of generative AI, using only Natural Language. Prompts allows you to develop features such as summarizing, drafting, answering questions, and more.

Try Prompts

Discover an AI capability

- Prompts**
Select a prebuilt prompt or make a custom one of your own.
- AI models**
Work with different models tailored to specific business situations.
- Document automation**
Extract and interpret data from general and fixed template documents using RPA and AI.
- Monitor activity**
Tables and graphs to help you monitor model activity and track the consumption.

Extract custom information from documents

Easily build, train and publish your own custom model to extract information such as text, table, number, handwritten text, checkbox, and more. Custom models are trained with your own data, so they're tailored to your documents. Check out our [learn module](#) to get started with building a custom document processing model.

Invoices

Previously known as Unstructured, this option is ideal for **any kind of documents**, especially when there is no set structure or when the format is complex. You can teach this model to extract data from structured or unstructured documents that have different layouts. This model is powerful but had long training time.

Here you can see some examples of general documents:

1 of 1

RENTAL AGREEMENT

This rental agreement made on 01 July, 2022, between Constanza Rojas (hereinafter called "TENANT"), and Quincy Watson (hereinafter called "LANDLORD"), shall provide as follows:

1. LANDLORD TENANT ACT: This Rental Agreement is governed by Residential Landlord and Tenant Act.

2. LOCATION: The Landlord hereby rents to the Tenant and the Tenant hereby rents from the Landlord a parcel of property located in 7890 Hill Street, IL 54004 said parcel of land is more particularly described as follows: 3-bedroom apartment with spacious main bedroom and a second bedroom.

3. TERMS: This Rental Agreement shall commence with start date of 01/15/2022 and end date of 01/15/2023. Tenant consents that upon the termination of this Rental Agreement, or any extension thereof that Tenant will quietly and peacefully deliver up possession of the premises in good order and

0 documents

Facturas

0 documents

These are similar. Add it to the same collection.

These have different layouts and wording. Add it to different collections.

Create only one collection if you have less than fifty documents. Otherwise add 5 or more documents with similar layout per collection .JPG, .PNG or .PDF — up to 1 GB or 50000 pages in total.

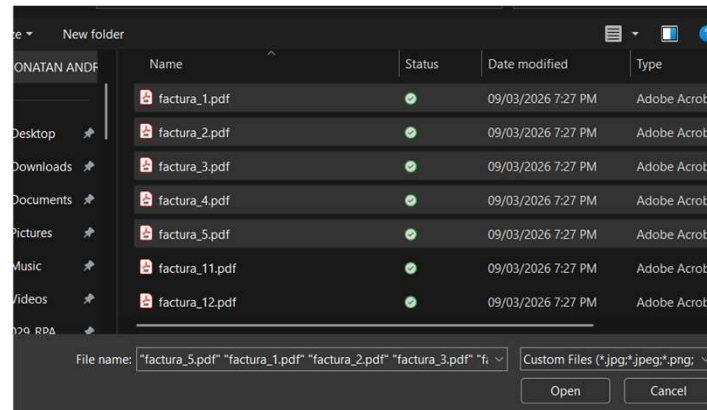

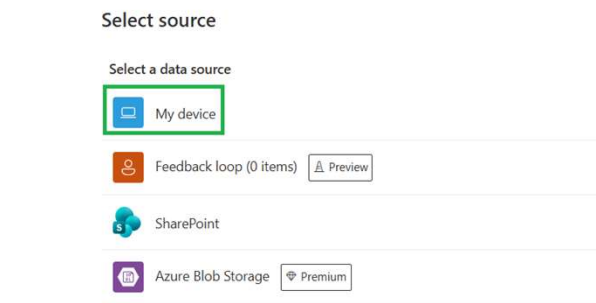

A collection is a group of documents sharing similar layouts and wording. Thanks to collections, you can create a unique AI model that will extract the same information from various documents.

Invocar modelo desde un flujo

The image displays three screenshots of the AI Hub interface, illustrating the process of creating and configuring a workflow to extract text from PDF documents.

Top Left Screenshot: Shows the "Manually trigger a flow" workflow editor. The left sidebar includes tabs for "Parameters", "Settings", "Code view", and "About". The "Parameters" tab is active, showing a "File content" input field with a placeholder "Please select file or image". Below the input field is a button labeled "+ Add an input". The main canvas displays a vertical flowchart with three steps: "Manually trigger a flow", "Process documents", and "Compose".

Top Right Screenshot: Shows the "Process documents" workflow editor. The left sidebar includes tabs for "Parameters", "Settings", "Code view", and "About". The "Parameters" tab is active, showing the following configuration:

- AI model *: Document Processing 9/3/2026, 7:40:41 PM
- Form type *: PDF Document
- Form *: File content con... (with a close button)

Below the parameters is an "Advanced parameters" section showing "Showing 0 of 1" with "Show all" and "Clear all" buttons. At the bottom, a status bar indicates "Connected to Microsoft Dataverse." with a link to "Change connection reference". The main canvas displays a vertical flowchart with three steps: "Manually trigger a flow", "Process documents", and "Compose".

Bottom Screenshot: Shows the "Compose" workflow editor. The left sidebar includes tabs for "Parameters", "Settings", "Code view", and "About". The "Parameters" tab is active, showing an "Inputs *" section with an "Email" input field. The main canvas displays a vertical flowchart with three steps: "Manually trigger a flow", "Process documents", and "Compose".

Muchas gracias!
